Wire Saddle

Features:
Wire Saddles are ideal for routing wires or optical fiber. Wires can be easily inserted into the top side of the saddle to protect them from abrasion. The **Micro** is ideal for low profile applications and takes up very little real estate. The **MOFNSA** is designed to snap into a .125" diameter hole in a .093" thick panel for applications that require a thicker board than the standard 1/16" board.

CITIZEN® Printers

THERMAL PRINTERS:

Use a non-impact method for printing. This is accomplished by using chemically treated thermal paper. Chemicals suspended in the paper react to heat generated by the print head to form dots that make up the characters or image. Citizen offers a thermal serial printer and a thermal line printer.

The serial printer uses a moving head that prints one character at a time, it is most suited for character printing, although the high speed model does support graphics. Its main benefit is low cost. Line printers have a fixed print head, printing one line at a time. It is suited for both high speed character and graphic printing. Its main benefits are higher definition graphic printing along with fewer moving parts.

INTERFACE BOARDS:

Acts as an interface between user's system and the thermal printer. Monitors temperature and paper status. Controls motor(s) and thermal head energy for optimal printing. Generates built in test pattern. Accepts both simplified Centronics or RS-232C (TTL only) interface.

NOTE: CBMA now markets the former Panasonic line of Thermal Printer Mechanisms. Please call Digi-Key for details.

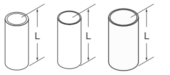
Self-Aligning and Universal LED Spacer Mounts



Self-Aligning Bi-Lead Spacer Mounts

These unique, LED mounting spacers, for T-1 and T-1 3/4 LEDs, reduce labor costs by simplifying pre-assembly to the printed circuit board. The spacer features and internally tapered barrier which guides the leads and eliminates the possibility of crimping or shorting. The internal configuration also assures positive self-alignment on .100 (2.6) centers. The bosses serve the dual purpose of heat dissipation and easy post soldering cleanup.

Features: • Internal design eliminates crimping or shorting of leads • Positive self-alignment of leads on .100 (.25) centers • Cost and labor saving • No special tools required **Material:** Natural Nylon, UL Rated 94V-2

Universal Spacer Mounts

Unique design separates leads and retains Tri-Lead and Bi-Lead components. Designed for PC board mounting of Tri-Lead and Bi-Lead T-1 and T-1 3/4 LEDs. Provides height control, lead retention and stability. Also suitable for mounting lamps, resistors, transistors, diodes and capacitors. **Material:** Black PVC, UL Rated 94V-0

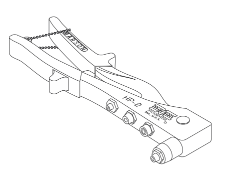
Hand Rivet Tools

HP-2®/39000



The HP-2 is the largest selling hand rivet tool in the industry. Its square shoulder fulcrum pin of cold-formed heat-treated steel prevents pin rotation that can elongate the engaging holes and cause premature tool failure in imitation tools. The HP-2 hand rivet tool sets up to 3/16" steel rivets and comes with four mounted nosepieces (3/32". 1/8". 5/32" and 3/16") and a service wrench.

Super Strips and Circuit Strips

Universal Breadboarding Elements with Solderless Plug-In Tie Points

As with all solderless breadboarding units from 3M, components simply plug-in and are interconnected with ordinary solid hook-up wire; #22 AWG is recommended.
All sizes of DIPs and discrete components with lead diameters up to .032" (.82mm) can be accommodated. These handy strips may be permanently mounted with the integral non-shorting instant-mounting backing, or for quick removal, they may be mounted with screws on panels up to 1/8" (3.18mm) thick.
Hardware and mounting templates are provided with every strip.

NEW! Educational DIY Solder Kits

TW-DIY-5002 — Temperature Meter Kit

This kit shows how much of electronics today can be contained in a single chip, the Intersil 7106. Commercial low cost digital volt meters are nothing more than this kit, some switches and passive components and a nice plastic case.

438-1076-ND **$38.07**

TW-DIY-5024 — Logic Probe Kit

An important piece of equipment for test and measurement of digital equipment. Can be used in fault finding and testing as well as to assist in design work and to find out how digital equipment works. Switch for either TTL or CMOS. Includes detection circuit for very fast pulses. Gives visual (3 LEDs) and audio (piezo buzzer) response.

438-1077-ND **$12.72**

TW-DIY-5029 — Combination Lock Kit

An introduction to a basic but fully working combination lock. Separate touch pad with 9 pads. Lock is reset if an incorrect digit is pressed. Relay is capable of switching 250V. 12V operation.

438-1078-ND **$16.54**

TW-DIY-5052 — Five Ultra Bright LED Flasher Kit

This CMOS VLSI single chip-on-board is designed for electronic toy and warning light applications. Five LED's flash on/off in a pseudo-random or sequential mode depending on whether a switch is open or connected high. Continuous flashing mode or toggle on/off is selectable by another switch. The flash rate is controlled by a trimpot.

438-1079-ND **$12.72**

TW-DIY-5061 — 3 1/2 Digital LED Panel Meter Kit

Kit 61 has been designed as a versatile 3 1/2 digit panel meter. Also in this kit we have used small, monoblock capacitors rather than the much bigger mylar or metallized types. This saves space as well as making the meter look better.

438-1080-ND **$38.07**

TW-DIY-5134 — Introduction to LCDs Kit

Learn how to connect a 2x16 LCD to a PC parallel port. First this kit will show you how to write keystrokes from the PC keyboard to display on the LCD. It will show you how to process this data (rotate the string left and right.) All the code is provided. Second, there is an on-board DS1620 to measure temperature. The temperature is displayed in °F or °C. Just press a button to display either. With the DS1620 you may set breakpoints to turn a thermostat on/off. We provide all the code to do this. Once the DS1620 is programmed it may be removed and placed in another device for temperature control. Many web references are provided.

TW-DIY-5141 — Multi-Mode Timer

This kit contains seven different timing modes using only one IC and some support components on a single sided PCB. This is a lot less than many single mode traditional timers. The timing modes and delay ranges are selected by on-board DIP switches. Simply select the time delay you want and that's it - no adjustment required.

438-1082-ND **$38.07**

TW-DIY-5146 — 40 Second Message Recorder with Looping Option Kit

This kit will take any ISD DIP chip from ISD2540 to ISD25120. A switch will loop the first message continuously.

TW-DIY-5151 — Programmer for Serial EEPROMs Kit

Serial EEPROMs are finding more and more use in electronic devices these days. These small 8 pin devices offer non-volatile data storage and require minimal I/O lines to connect to them making them ideal in many microcontroller based applications. The programmer connects to the PC parallel port and is controlled by driver software running on the PC.

438-1085-ND **$12.72**

TW-DIY-5180 — Rolling Code 4-Channel UHF Remote Control Kit

This is one very clever remote control. With rolling code, it's close to impossible to electronically crack. With four channels, all either latching or momentary operation, it's extremely versatile. With a sensitive prebuilt receiver, it's long ranch. With up to 16 key ring size transmitters, it's go-anywhere. The kit even includes the key ring.

SMT Adapter Boards

Surface mount components are soldered to pads on boards. Traces extend from pads to prototyping holes on standard 0.1" x 0.1" (2.54mm x 2.54mm) grid. Individual leads can be monitored or other components can be added to evaluate performance of surface mount product. Saves time and prototyping cost.

All boards made with FR4 laminate, and featuring ground plane on back side. Pad to pad spacing (pitch) is measured in mils (thousandths of inch).

SURFBOARDS® by

The Surfboard Concept:
The concept behind SURFBOARDS is elegantly simple. Many models incorporate foil patterns that are designed to accommodate a wide variety of component mounting footprints. SURFBOARD® models for SOICs and PLCCs provide standard mounting footprints for the IC and depending on the model chosen, will include a prototyping area for additional components or provide a direct pin-out. Most SURFBOARD® models feature SIP (single in line) pins that make prototyping and interfacing with other circuits easy.

Specifications: • Material: G-10 FR-4 Fiberglass laminate, 1oz. Cu. .032" (.81mm). Thickness ±.005" (±.13mm) • S.I.P. Pins: On applicable models. Soldered on .100" (2.54mm) centers. SURFBOARDS® can be hand soldered and are compatible with most industrial soldering processes. (Suggested soldering and assembly guidelines included).

The universal circuit patterns allow for the mounting of 0603, 0805, 1206 and mini-melf packages as well as a wide variety of 3 terminal devices.

The 33000 Series of Surfboards® are application-specific adapters that convert surface mount component footprints to Single-In-Line (SIP) format. The boards feature pre-installed pins on .100" (2.54mm) centers making them compatible with conventional breadboards, solderless breadboards, and sockets. The SIP format provides ease of signal probing as well as higher densities when prototyping. Models are available to accept a wide range of surface mount semiconductors and integrated circuits.

Models 33113 and 33623 feature two SIP pins for each pad for higher current applications. Model 33213 features large soldering pads as connection points and SIP pins for measuring purposes. Boards are .031" ± .005" (.79mm ±.13mm) thick FR-4 and feature solder-coated 1-oz. Circuit Foils that can be hand-soldered or soldered by most conventional processes.

SIP pins are soldered in place on .100" (2.54mm) centers. All boards feature solder mask to limit flow of solder to pad area and aid assembly. Just add parts and plug in.

Titanium Tweezers

Titanium tweezers are advantageous for use in the electronics and science industries due to lack of the shedding of particles, like the stainless steel tweezers. Anytime an abrasive substance is handled and microscopic particles are a detriment, titanium is a good choice. Titanium is non-magnetic therefore is extremely useful when handling magnetic materials, or when working in a magnetic field.

ESD Mats and Hardware

Static Control Anti-Fatigue Mats

3M Anti-Fatigue Mats consist of a matrix of hollow cylinders that function like a spring when compressed. These mats provide a durable cushion that offers secure, stable footing and a unique energizing responsiveness. Their structure provides a stable surface supported by rubber cells that soften in response to surface activity. These cells provide the most effective cushioning solution because the 3M Static Control Anti-Fatigue Mats get softer as compressed, not harder like products made of foam. **Features**: • Color: Black • Resistance: Surface to Ground Snap: <1 x 10^6Ω, Surface to Ground: <2 x 10^6Ω (when connected through 3M Ground Cord 3040) • Temperature Use Range: -40°C ~ 82°C

Dissipative Mats

8200 Series: Vinyl mats are soft table and floor mats with a unique three-layer construction. The top layer is durable static dissipative vinyl, which has sufficiently low resistance to discharge static-laden conductors, yet will prevent the shorting of pins on the backs of printed circuit boards laid on the mat.

8200 Series Floor Mats: Includes one 15 foot (4.6m) 3040 Ground Cord and two 3050 Snap Fasteners (installed).

8210 Series Table Mats: Includes two 3M 3050 Snap Fasteners (installed) and one 3M 3048 Wrist Strap Grounding System. Wrist Straps must be ordered separately.

8260 and 8280 Series Table and Floor Mats: Include two 3040 Ground Cords and two 3050 Snap Fasteners to be installed by the user.

8290 Series Floor Mats: No Hardware included

8800 Series: Rubber mats consist of a top layer of static dissipative rubber laminated to a bottom layer of conductive rubber. Both layers are made from vulcanized synthetic rubber, which offers excellent resistance to oil, grease and most common solvents. They offer superior resistance to heat and hot solder as compared to vinyl or olefinic materials.

8810 Series Table Mats: Includes two 3034 Snap Fasteners (installed) and one 3048 Wrist Strap Grounding System. Wrist Straps must be ordered separately.

8840 and 8860 Series Table Mats: Includes two 3040 Ground Cords and five 3034 Snap Fasteners to be installed by the user.

Wrist Strap Workstation Monitor

The 3M™ 724 Wrist Strap Workstation Monitor continuously verifies the resistance of the operator and work surface ground connections. The monitor uses a reliable resistance method that actually includes the operator's skin resistance to determine if the system is operating properly. If the operator's resistance exceeds 10 megohms or 35 megohms, or the wiring connections exceed 3.7 megohms, audible and visible alarms are triggered. The unit will also warn of potentially dangerous low-resistance situations. The monitor uses the light and compact dual conductor wrist strap. Dual conductors provide the resistance circuit that is monitored as well as provide grounding redundancy. If one conductor fails, the other will still function to prevent sensitive components from being exposed to static. Comes complete with a quick connect/disconnect 732 Remote Jack and mounting hardware.

CHIPQUIK SMD Removal Kits

CHIP QUIK SMD rework products are designed as a low cost way to rework SMD components including QFP and PLCC packages, with very low temperature (300°F). SMD1 contains everything needed for removing SMD components with either convection (hot air) or conduction (solder iron). Use SMD16, SMD32, and SMD291 for larger jobs which require more CHIP QUIK material and flux. SMD2000/SMD6000 kits are complete solder/desolder rework kits for safely removing SMD components, cleaning the pads, placing component and reapplying solder safely with low operating temperatures. Approved by many top industry PC board manufacturers for reworking faulty components, without the need for specialized solder equipment. **CHIP QUIK** removal alloy-no lead formula has been tested for rework on PC Boards that were manufactured with lead and no-lead solders with excellent results on both. It has also been successfully tested for SMD removal on all the major no-lead solders that are presently available in the industry.

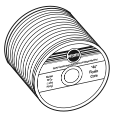
"331" Organic Water Soluble Solder



Kester "331" Organic Flux is a water soluble formula for use in flux-cored solder wire. Kester "331" flux is more effective than rosin fluxes in soldering difficult metals and allows a simple water wash for flux cleanup. The flux is more heat stable than most organic fluxes, resulting in minimal smoke and odor. The residue can be completely removed with a simple water rinse. Kester "331" is classified as type ORH1 per IPC ANSI/J-STD-004. Red Label.

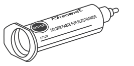
kester Solder Paste



Kester solder paste was developed for applications of surface mount PCBs and components. All pastes are SN63/PB37 with a mesh size of -325 ~ 500 (25 ~ 40 microns) and come in 35gm syringes for hand dispensing. R276 no-clean formulation provides optimal performance in all types of dispensing applications, designed for reflow practices that do not require cleaning of the PCB. R500 water soluble solder paste is aggressive enough to remove tenacious oxide layers and offers excellent wetting characteristics.
Pastes should be refrigerated to preserve their usable life.
Note: To ensure customer satisfaction and product integrity, pastes must be shipped overnight or 2nd Day Air only. Tips are not included.

Paste Flux and Liquid Flux Pens

Kester flux pens use a spring-loaded tip to dispense just the right amount of flux while preventing the flux inside from drying out. Tacky Solder Flux is a no-clean paste flux that maintains its characteristics for up to 8 hours after dispensing, can be used in a wide range of temperature and humidity conditions, and can reflow in both air and nitrogen environments. SP244 is a mildly activated rosin paste flux designed to be used as a no-clean formula for rework applications.

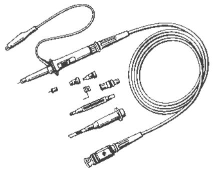
High-Performance Oscilloscope Probes

IEC 1010 Category I or Category II Compliance



It is important that you select a probe with the same bandwidth or "frequency range" as the oscilloscope used for the job. For example, if you're using a 100 MHz oscilloscope, choose a probe with a minimum of 100MHz. To achieve optimum performance, choose a probe with more than twice the bandwidth of the oscilloscope.

Category I This slim design comes equipped with interchangeable cables, probe tips and grooved heads. Compensation adjustment placed in the BNC eliminates noise and interference related pickup. Available in switchable and non-switchable versions.

Category II This versatile design offers three monolithic interchangeable probes in 60, 100, and 250MHz bandwidth.

Probe-It

The 3M series of Probe-It plunger-actuated clips make test connections to individual component leads faster and easier. Simply press cap to extend the hook contact, place on component lead or wire under test, and release for hands-free troubleshooting and circuit testing. When removed from the lead, the hook contact retracts into the plastic tip to minimize the possibility of shorting components.

Specifications: • **Contact:** Phosphor bronze, solder type termination • **Body:** Nylon • **Suggested Wire:** 26AWG (7-strand, tinned copper wire)

Panasonic® Nickel-Metal Hydride Batteries and Tabbed Versions

Features:

- **Superior Energy Density:** Nickel-metal hydride batteries have approximately double the capacity compared with Panasonic's standard Ni-Cad batteries
- **High Cycle Life:** Like Ni-Cad batteries, nickel-metal hydride batteries can be repeatedly charged and discharged up to approximate 500 cycles (under ideal conditions).

Because a specially designed charger will be necessary, please consult the Panasonic Technical Handbook (P001-ND) regarding the charge system • **Flat trickle charge cannot be used** • **Excellent Discharge Characteristics:** Since the internal resistance of nickel-metal hydride batteries is low, continuous high-rate discharge up to 3C (10C for 4/5SC, SC) is possible in the same way as for Ni-Cad batteries. • **Excellent Reliability:** Self-discharge performance is the same or better than that of nickel-cadmium batteries. In addition, charging batteries after extended storage restores original battery capacity. Battery safety has also been improved and verified through testing under a wide range of conditions of use.

Applications:

• Communication • Office Automation • Audio Visual Equipment • Other High-Tech Products.

Caution for Safety:

Improper usage may cause battery liquid leakage, heat generation or explosion, resulting in equipment failure or injury • Do not disassemble or rework the battery • Do not solder the battery directly • Do not use new batteries together with old batteries, or different type batteries mixed together • Follow the specified charge conditions.

"H" Type:

- Improved low rate charge characteristics at higher temperatures.
- Ideal for back-up applications (with appropriate charge control circuitry).

Notes:

- **Battery Packs made with NIMH Cells include a thermostat.**
- **Nickel-metal hydride batteries are not a drop-in replacement for Ni-Cad batteries.**
- **Recycling information available on Digi-Key website.**
- **See following page for Battery Pack information.**

It is the responsibility of each user to ensure that each battery application system is adequately designed safe and compatible with all conditions encountered during use, and in conformance with existing standards and requirements.

Digi-Key is not approved by any state or federal agency as an authorized supplier of product for medical, life support or life sustaining devices or systems.

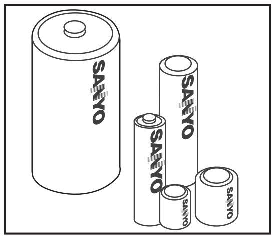
SANYO Ni-Cd Batteries



Nickel-Cadmium (Ni-Cd) batteries use nickel oxide in its positive electrode (cathode), a cadmium-compound in its negative electrode (anode), and potassium hydroxide solution in its electrolyte. The Nickel-Cadmium battery is rechargeable, so you can use it over and over.

Features: • Discharge voltage remains stable even in conditions of high-rate discharge current – for equipment needing a high-rate discharge current, it is far more stable than other battery types • Wide operating temperature range of -20°C ~ 60°C — operates especially well in low temperatures • Performance does not deteriorate even after long-term storage – full recovery of original performance levels after recharging • Designed to withstand overcharge and overdischarge – superior durability • Sealed configuration with gas release vent – easy maintenance and no leakage • Produced using an ISO9000 certified quality control system – high quality and reliability

Applications: • Cellular phones, telecommunications equipment • Portable audio-visual equipment • Emergency lights • Electric tools • Battery-powered vehicles

Notes: • Recycling information available on Digi-Key website.
• See previous page for Battery Pack information.

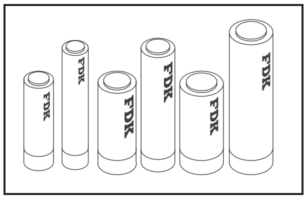
Nickel-Metal Hydride Batteries



The Twicell Nickel-Metal Hydride battery is a secondary battery which lasts more than twice as long as CADNICA batteries. Twicell uses hydrogen absorbing alloys in its negative electrode (anode) and nickel oxide in its positive electrode (cathode).

Features:

• High volumetric energy density well exceeding that of Lithium-ion batteries • Double capacity of standard CADNICA batteries • Can be used over and over (more than 500 times with a specific charger) • 1.2 ~ 1.6 hour quick charge with a specific charger • Produced under a ISO9002 certified quality control systems

Applications:

• Notebook computers • Cellular phones, PHS phones, telecommunications equipment, video camera, digital still cameras, PDA, shavers, electric toothbrushes, and various portable equipment

Notes:

- **Battery Packs made with NIMH Cells include a thermostat.**
- **Nickel-metal hydride batteries are not a drop-in replacement for Ni-Cad batteries.**

Lithium Batteries

The main features of lithium batteries are as follows:

- **High Voltage:** Nominal voltage is 3V, which is nearly double that of other batteries which use the aqueous electrolyte system, such as manganese dry batteries, and silver-oxide batteries.
- **High Energy Density:** Overwhelmingly high energy density, as compared with conventional batteries and other lithium batteries. The energy density is 5 to 10 times higher than that of manganese dry batteries.
- **Long Service and Shelf Life:** Since Panasonic lithium batteries are composed of chemically and thermally stable material, self-discharge is extremely small. Deterioration when stored at room temperatures is ca. 0.5% annually – worry about deterioration is unnecessary.
- **Stable Flat Discharge Voltage:** Since conductive carbon is continuously formed during discharge, internal impedance does not increase until the end of discharge, thus stabilizing discharge voltage.
- **Excellent Temperature Characteristics:** Organic solvent ensures a low electrolyte freezing point so that the batteries can be used in a wide temperature range, -40°C ~ 85°C is standard (-40°C ~ 80°C for BR2325 and BR2330; -40°C ~ 125°C for the High Temperature Coin Type; -40°C ~ 70°C for Camera Type; -30° ~ 60°C for CR2004/P9A).
- **BR Types versus CR Types:** BR, or (CF) n/Li, batteries provide a more stable voltage particularly during the last half of discharge, while CR, or Mn02/Li, batteries provide a higher voltage during the first half. CR batteries also can provide a higher current capability than BR batteries. In storage, BR batteries perform better at high temperatures. These characteristics must be taken into consideration when selecting a battery for a particular application.
- **UL Approval:** Panasonic Lithium batteries are UL recognized. UL File No. MH12210.
- **DOT Exemption:** Panasonic lithium cells and multiple cell batteries are authorized for transportation, in commerce, by U.S. shipping exemption DOT-E7052.
- **Disposal Information:** Panasonic lithium cells are not an EPA listed hazardous waste, but may be considered a "characteristic" hazardous waste. Lithium metal, the anode component of the cells, is considered by the U.S. EPA to be hazardous when disposed because it is reactive with water. However, a cell which contains a small quantity of lithium metal is not necessarily a hazardous waste. Disposal regulations and policies are different in each State and are subject to frequent changes. Contact your local jurisdiction for specific advice on disposal.

Panasonic Manganese Lithium Rechargeable Batteries (ML Series)

Features:

- **Charging at voltage levels even under 3V**. In order to support the current trend in ICs toward lower voltages, these batteries can be charged at a 3 ±0.2 voltage level, and this makes it easier to set the charging circuits for the circuits which employ 3V ICs.
- **Large capacity for hour-after-hour back-up.**
- **Excellent withstand voltage characteristics.** These batteries can withstand the application of a continuous 3.2V voltage at a high temperature of 60°C (140°F).

Applications:

- Power source for backing up memory data in mobile telephones, personal handyphone systems, memory cards, pagers, data terminals and office automation equipment.

CYMBET CORPORATION EnerChip™

The Cymbet EnerChip™ family of solid-state, rechargeable thin-film batteries is a new innovation in energy management and energy storage. It is well suited for applications where battery backup power is needed to maintain the settings of microcontroller memories, real-time-clocks and SRAM during power loss or power failures.

CBC-EVAL-08: The evaluation kit combines a solar panel energy transducer with the EnerChip EH CBC5300 energy harvesting module that has two 50µAh EnerChip batteries. The EnerChips provide storage and starting power for the energy harvesting module. The purpose of this demonstration platform is to enable designers to quickly develop energy harvesting applications.

CBC5300-24C: The EnerChip EH CBC5300 is a self contained energy harvesting power module in a 24-pin DIP configuration with two 50µAh EnerChips. It is designed to accept a range of energy transducer inputs, store the harvested power, and deliver managed power to the target system. The CBC5300 enables system designers to quickly release energy harvesting based products.

CBC-EVAL-05: The evaluation kit is used to demonstrate the capabilities of the EnerChip thin film batteries and the EnerChip CC with integrated battery management capabilities. The kit can be used to demonstrate: • EnerChip battery • EnerChip CC device • EnerChip CC in parallel with the other EnerChip battery.

CBC-EVAL-11: The demonstration kit combines an inductive transmitter board with a receiver board containing an EnerChip CC CBC3150 solid state storage device with integrated power management. The receiver board also has a planar antenna for receiving power from the transmitter board, an output capacitor for delivering pulse current for radio transmissions, and a header connector for mating to a target board.

Sealed Lead-Acid Batteries (Valve Regulated)

GENERAL FEATURES: "DO NOT LEAK!!"
• High Quality & High Reliability: The LCR battery has stable and reliable capacity. 100% tested on line for voltage, capacity, and seals. And all vents are 100% visually inspected during the final assembly process. **• High Power Density:** These batteries save installation space, while providing full and reliable power for the equipment, and many have been designed for rapid recharge, or for high power output. **• Leak-resistant Structure:** The LCR battery uses an absorbed electrolyte system. The LCR batteries have exceptional leak resistance, and can be used in any position. **• Long Service Life; Float or Cyclic:** The LCR battery has long life in float or cyclic service. **• Easy Maintenance:** There is no need to check the specific gravity of the electrolyte or to add water during the service life. Totally sealed, and needs only charging for maintenance. **• No Corrosive Gas Generation:** There is no corrosive gas generation during normal use. **• Exceptional Deep Discharge Recovery:** LCR batteries have exceptional deep discharge recovery and charge acceptance, even after deep or prolonged discharge. **• D.O.T and I.A.T.A. Approval:** Transportation; The SLA batteries should be handled as common cargoes for both air and boat shipping. **• U.L. Component Recognition:** U.L. Component Recognition under UL1989, requires that the battery safely vent when overcharged. It further requires that the equipment and battery be submitted together for formal UL approval. (**UL Component Recognition does NOT remove this requirement for complete package testing**). The manufacturer suggests peak charging all sealed lead acid batteries before use and intermittently during storage.

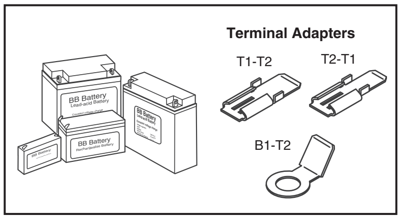
Sealed Lead-Acid Batteries (Valve Regulated)



TECHNICAL FEATURES: “DO NOT LEAK!!”

- **Sealed Construction:** BB® unique construction and sealing technique ensures that no electrolyte leakage should occur from the terminals or case. They are classified as “Non-Spillable” and meet all requirements of the International Air Transport Association (I.A.T.A.) and D.O.T.
- **Electrolyte Suspension System:** All BB batteries utilize an electrolyte suspension system consisting of a glass fiber separator material. This suspension system helps to achieve maximum service life, by fully retaining the electrolyte and preventing its escape from the separator material. No silica gels or other contaminants are used.
- **Maintenance Free Operation:** During the life of BB batteries, there is no need to check their specific gravity or add water etc. In fact, there are no provisions for such maintenance functions to be carried out.
- **Operation in any Orientation:** The combination of sealed construction and BB’s electrolyte suspension system permits operation of BB batteries in any orientation, but upside-down charging should be avoided. Battery will not lose its capacity, electrolyte, or service life under any orientation.
- **Low Pressure Venting System:** BB batteries are equipped with a safe, low pressure venting system, which is designed to release excess gas and reseal automatically in the event of the internal gas pressure rising to an unacceptable level. This low pressure venting system, coupled with the significantly high recombination efficiency, makes BB batteries one of the safest valve regulated lead acid batteries available.
- **Heavy Duty Grids:** The heavy duty lead calcium alloy grids in BB batteries provide an extra margin of performance and service life in both float and cyclic applications, even in conditions of deep discharge.

The manufacturer suggests peak charging all sealed lead acid batteries before use and intermittently during storage.

- **U.L. Component Recognition:** U.L. Component Recognition under UL1989, requires that the battery safely vent when overcharged. It further requires that the equipment and battery be submitted together for formal UL approval.

CYCLON® Batteries

Sealed pure-lead cells were invented by the Gates Corporation in 1973. The purity of the materials used is key to supporting the CYCLON batteries performance benefits. A longer service life, meaning fewer replacements and the cost associated with it, combined with higher reliability and fewer system failures, result in a lower long-term cost of ownership to the end user or equipment owner. **Features:** • Power density: Per unit weight, the power provided by pure lead products offers the greatest high rate power density for your energy dollar • Cycle Life: Deliver up to 300 cycles (100% DOD, C/5) • Float Life: Single cells offer a fifteen year design life • High stable voltage delivery: The high stable voltage delivery of a pure lead battery results from its low internal resistance • Safety: Single cells and Monoblocs emit minimal to no gassing under normal charging conditions • Underwriters Laboratories (UL) recognizes all CYCLON cells and batteries as components • Rugged construction: EnerSys products can withstand not only extreme temperatures but also harsh usage • Fastest recharge • Shelf life: To assure maximum reliability it is recommended that all stored cells/batteries be recharged (boost charged) once every 24 months

MEMORY PROTECTION DEVICES, INC.

NEW! "Glider" Battery Holders

Memory Protection Devices has introduced a new category of battery holders for lithium coin cell batteries. "Gliders" are a hybrid type combining the low cost of retainers with higher reliability than regular coin cell battery holders, according to MPD. They are suitable for handheld consumer products, electronic cards, electronic toll tags, single-use devices, alarm systems, main boards, PND's and RFID. Gliders are available in styles ranging from 10mm to 24mm diameter. Versions that hold two batteries in series for 6V applications are also available. The retainer has pressure contacts that offer low electrical resistance and are optimized to keep a tight connection with the battery. The ultra light weight plastic body has a physical feature for reverse polarity protection.

Features: • Special plastic tray eliminates shorting • Nickel-plated phosphor bronze retainers • Easy to load, lock and replace • Batteries are protected from polarity reversal • Uninterrupted contact is assured • PC pin and surface mounting • Low profile • Shock and vibration resistant

High Performance Heat Sinks

ATS maxiFLOW™ Heat Sinks have a low profile, spread fin array to maximize surface area for more effective convection (air) cooling.

The maxiGRIP™ Heat Sink Attachment System features a plastic frame clip that snaps securely around a component's perimeter. A stainless steel spring clip runs through the heat sink's fin field, fastens securely to the plastic frame and applies steady, even pressure to the component. The system allows easy sink detachment and reattachment with no damage to the component.

Component/heat sink assemblies using maxiGRIP meet Telcordia GR-63-Core Office Vibration; ETSI 300 019 Transportation Vibration; and MIL-STD-810 Shock Testing and Unpackaged Drop Testing standards.

Sil-Pad 600® is a thermally conductive, silicone elastomer filled with special ingredients to provide higher thermal properties than the original fiberglass based Sil-Pad. This material has excellent physical and mechanical characteristics while remaining cost competitive. (Electrically Insulating Material)

Sil-Pad 900-S® family of thermally conductive insulation materials are designed for low cost applications requiring high thermal performance. Intended as an improved Sil-Pad 600 alternative.

Q-Pad 3® is a thermally conductive, fiberglass reinforced graphite imbedded elastomer which conforms to surface textures extremely well. This material eliminates problems associated with thermal grease such as contamination of electronic assemblies and reflow solder baths. Q-Pad 3 may be installed prior to soldering and cleaning. (Electrically Conducting Material)

Sil-Pad K10® is a thermally conductive Kapton composite film coated with boron nitride filled polyester resin, offering the highest thermal properties of the Kapton insulators with minimum thickness and lower thermal resistance. Designed to replace brittle ceramic insulators. (Electrically Insulating Material)

CPU Pad® is a thermally conductive, electrically insulating, Kapton double coated tape. Typically used between the CPU and heat sink, it was designed to be used in place of clips used to attach heat sink to CPU. No clamping times or high pressure is required.

SPT 400 is a thermally conductive insulation for clip mounted plastic power devices. These TO-220 thermal tubes slip over the semiconductor device and conduct the heat to the heat sink and clip. Designed to be used on heat sinks with metal clips to attach device to heat sink. (Electrically Insulating Material)

HI-FLOW™ 115-AC is a thermally conductive fiber reinforced phase change material. The product consists of a thermally conductive 65° C phase change compound coated on a fiberglass web with an adhesive coating on one side for attachment to a cold heat sink. Handles like a Sil-Pad at room temperature and flows like high quality grease at elevated temperature.

Bond Ply™ 100 is a thermally conductive, double-sided pressure sensitive adhesive tape. The tape consists of a high performance, thermally conductive acrylic adhesive coated with a fiberglass reinforced interweave. Bond Ply 100 is designed to attain high bond strength to a variety of surfaces and to maintain high bond strength with long term exposure to moderate heat and high humidity. Typical Applications: • Mounting a heat sink to a BGA graphic processor • Mounting a heat sink to a computer processor • Mounting a heat spreader to a power converter PCB • Mounting a heat spreader to a motor control PCB.

Gap Pad™ 1500 is designed to cost-effectively maximize heat transfer from electronic components to heat sinks or heat spreaders. GP 1500 is a highly conformable low-modulus material that fills air gaps due to steps, rough surfaces and high stack-up tolerances. The softness relieves stress and absorbs shocks minimizing damage to delicate leads. GP 1500 is an electrically isolating material that allows its use in applications requiring isolation between heat sinks and high voltage, bare leaded devices.

Gap Pad™ 1500R has the same highly conformable low modulus polymer as the standard Gap Pad™ 1500. The fiberglass reinforcement allows for easy material handling and enhances puncture, shear, and tear resistance. The tacky nature of both sides of the material allows for good compliance to mating surfaces of components, further reducing thermal resistance.

Sil-Pad K-4® uses a specially developed film which has high thermal conductivity, high dielectric strength and is very durable. Sil-Pad K-4 combines the thermal transfer properties of well-known Sil-Pad rubber with the physical properties of a film. Sil-Pad K-4 is a durable insulator that withstands high voltages and requires no thermal grease to transfer heat.

Sil-Pad K-6® is a medium performance film-based thermally conductive insulator. The film is coated with a silicone elastomer to deliver high performance and provides a continuous physically tough dielectric barrier against "cut-through" and resultant assembly failures.

Sil-Pad 1000® has the same excellent mechanical and physical characteristics of our Sil-Pad 400 material while offering a 35% reduction in thermal resistance. Sil-Pad 1000 is a composite of silicone rubber and fiberglass. It is specially filled and offers low thermal resistance. Sil-Pad 1000 is non-toxic and resists damage from cleaning agents. It is flame retardant and specially formulated for use as a thermally conductive insulator.

Sil-Pad 2000® is Bergquist's high performance, high reliability, thermally conductive insulator. Sil-Pad 2000 is designed for demanding military/aerospace and commercial applications. In these applications, Sil-Pad 2000 complies with military standards. This silicone elastomer is specially filled to maximize the thermal and dielectric performance of the filler/binder matrix. The result is a "grease-free", conformable material capable of meeting or exceeding the thermal and electrical requirements of high reliability electronic packaging applications.

Gap-Pad® VO Ultra Soft is recommended for extremely low stress applications. The viscoelastic nature of the material also gives excellent low stress vibration dampening and absorbing shock characteristics. Gap Pad VO Ultra Soft is an electrically isolating material which allows its use in applications requiring isolation between heat sinks and high voltage and bare leaded devices.

Heat Sinks

CTS Electronic Components (California) Inc. has helped pioneer the development of semiconductor heat sinks since 1954. Primarily used by all levels of OEM's engaged in the manufacture of commercial and military equipment, CTS maintains stock and support from prototype through production. CTS has prided themselves for their flexible manufacturing, quality products and on-time delivery. Clip-On versions have a built-in clip for attaching a device to a heat sink without additional hardware, positive locks prevent the semiconductor from sliding out.

TO-220 versions will also fit TO-202, TO-218 and TO-126 packages. Wattage values listed are at still air conduction only. Moving air will increase this value.

AC Axial Fans

NMB-MAT AC Axial Fans suit a wide range of applications. They force air out in a “funnel” type pattern, and are ideal when cooling a specific area such as a power supply that is surrounded by numerous components with minimum ventilation available. Some models available with IP54 and oil proof protection in select sizes (AMO/SMO suffix).

DC Blowers

NMB-MAT DC Blowers are most suitable for cooling in high back pressure applications. Since the fan impeller is housed inside a rugged plastic enclosure, the blower is not affected by high back pressure caused by objects in close proximity to the exhaust port.

Specifications: • Operating Temperature: -10°C ~ 60°C • Storage Temperature: -40°C ~ 75°C • Blowers with Hydro-Wave and Ball Bearing Technology

ebmpapst Fans

Drawings shown are a general representation only. For datasheets, please see Digi-Key's website.

Most electronic systems create heat which needs to be removed. Blowers and fans are the most reliable, efficient way to control heat rise in electronic equipment. EBM's Tubeaxial fans come in many sizes and fan speeds and are the most widely used form of cooling. Blowers move larger amounts of air where air drawn in is at a 90° angle from airflow exit. Impellers are the latest cooling types with higher efficiencies and one of the quietest performance of all types.

Pulse® A TECHNITROL COMPANY

Encapsulated Power Transformers

RoHS COMPLIANT

Encapsulated transformers have added advantages over non-encapsulated transformers. Reduced winding temperature differential due to heat transfer capability of the epoxy. Have a greater VA to Volume ratio which results in cooler and/or smaller transformers. Increased insulation reliability due to use of epoxy in place of tape/paper insulation. Encapsulation also increases shock/vibration and humidity/moisture resistance of the part.

Electrical Parameters:
- Temperature: 70°C
- Short Circuit Proof (unless otherwise noted)
- Hi-Pot tested: 4KV primary to secondary
- Frequency: 50/60Hz

Tightpak Toroidal Common Mode Line Choke

Actown's Toroid style of common mode chokes are designed with patented TIGHTpak™ technology. Within a single layer winding, 70% more turns are achievable over a traditional winding using the same size core and wire gauge. Parts are constructed to an industry standard footprint. Materials comply with 94V-0 flammability specifications. A 3mm spacer between each winding provides creepage and clearance to comply with UL, CSA and IEC safety specifications.

AlfaMag Electronics

NEW! Toroidal Transformers

AlfaMag Electronic PC Mount Toroidal Transformers are designed for applications requiring total output power from 1.6VA ~ 50VA. The PCB mountable encapsulated toroids offer the advantages of low stray magnetic field, low idling current, greater efficiency, and low audible noise over comparable E-I and U-I transformers. These toroids can be mounted directly onto the PCB.

Converter Transformers

The 7625xENC Series is specifically designed for use with Maxim's MAX250 and MAX253 chipsets to provide isolated RS232 interfaces. A carefully controlled turns ratio ensures consistent performance while a toroidal construction minimizes EMI.

The 78253 Series is specifically designed for use with the MAX253 chip set to provide isolated power supplies. The 5V version can supply 1W, and the 3.3V version can supply 500mW. A center tapped secondary winding allows for full bridge, half bridge or voltage doubling.

The 782485 and 782482 Series is specifically designed for use with Analog Devices chipsets to provide isolated RS-485 and RS-422 interfaces. Carefully controlled turns ratios ensure consistent performance while a toroidal construction minimizes EMI.

The 78250 Series is specifically designed for use with Maxim's MAX250 chipsets to provide isolated RS232 interfaces. Carefully controlled turns ratios ensure consistent performance while a toroidal construction minimizes EMI.

NEW! Power Transformers

TRIAD toroidal chassis mount World Series transformers are designed to meet most International Safety Agencies. The toroidal construction inherently helps reduce stray fields, increases efficiency and minimizes size compared to traditional EL transformers. These transformers are constructed with UL approved insulation system rated for 130°C. The primary and secondary are both electrically isolated from each other, and from the core itself. Toroidal chassis mount World Series transformers are available in sizes ranging from 25VA to 1000VA, and are equipped with generous insulated leads for connections.

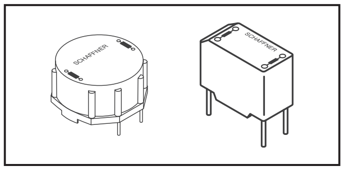
Current Compensated Chokes



RN chokes are attenuating common-mode or asymmetric interference signals, by being connected in series with the phase and neutral lines of an AC power-line input.

Features: • High saturation resistance and excellent thermal behavior • DC to 1kHz frequency • 100kHz ~ 3MHz common-mode resonance frequency

Non-Isolated POL

Features: • Easy to use, just plug them in • The industries smallest, most efficient and easy to use Integrated Switching Regulators (ISRs) • Uses unique, proprietary design, which employs 1 MHz of switching technology to produce state-of-the-art power densities, allowing the user to select the product performance that exactly matches the application • Only one, if any external component is required • Plug-in power solutions are designed to work from industry-standard DC bus voltages • The Output Current of the converter should match the maximum current need of your application • Choose an adjustable or fixed Output Voltage that meets your requirements • Vertical mounting uses the smallest footprint and surface mount and horizontal through-hole are available in most product series

TurboTrans™ Additional Features: • Optimizes the transient response of the regulator, while simultaneously reducing the quantity of external output capacitors required to meet a target voltage deviation specification • Can be used for target output capacitor bank, to significantly improve the regulator's transient response by reducing the peak voltage deviation

DC-DC µModule® Regulator Family

Resembling a surface mount IC, Linear Technology's line of µModule (LTM) regulators are complete power solutions containing the controller, power MOSFETs, compensation and inductors in a compact thermally efficient surface mount LGA package. Built with the highest quality standards in the industry and rigorously tested, the µModule regulator family dramatically reduces the amount of time and effort needed to successfully design DC/DC power solutions. **Temperature Grade:** E-grade devices are tested to meet performance specifications over the 0°C to Tmax listed with performance down to -40°C guaranteed by design, characterization and statistical process controls. I-grade devices are tested to meet performance specifications over the -40°C to Tmax listed. MP-grade devices are 100% tested at -55°C and +125°C and must pass 100% post-test visual screening.

EIA-232-D/EIA-485 Isolated Interfaces

NM232DDC: Electrically isolated dual transmitter and receiver designed to interface data terminal equipment (DTE) with data communications equipment (DCE). The device provides two data receive channels and two data transmit channels. Each channel is EIA-232-D, EIA-232-E and CCITT V.28 compatible at the interface boundary and TTL/CMOS compatible at the logic connections. No external components are needed and a single 5V input supply powers all functions either side of the isolation boundary. A low-power shutdown mode and high impedance state for receiver outputs in effected via two pins, SHUTDOWN and ENABLE.
NM485DC: Electrically isolated dual differential driver and receiver designed for balanced multipoint bus transmission at rates up to 1.25Mbits per second. The device provides two receive channels and two driver channels. The two driver channels have an active high enable. No external components are needed and a single 5V input supply provide all functions either side of the isolation boundary. The driver outputs provide limiting for positive and negative currents and thermal shutdown protection from line fault conditions on the transmission bus line. The receiver outputs will always be high if the receiver inputs are open. The isolation voltage between input and output is 1000Vrms.
NM485SLC: Low power electrically isolated differential driver and receiver designed for bidirectional data communication or multipoint bus transmission at rates up to 2.5Mbits per second. The device combines a tri-state differential line driver and a differential input line receiver. The driver and receiver have active high and active low enables, respectively, which can be connected together to function as direction control. The receiver features a high output state when the inputs are left open. Thermal shutdown protection forces the driver into a high impedance state, under line fault conditions. No external components are needed as a single 5V supply powers all functions either side of the isolation boundary.

Power Over Ethernet Modules — NMPD01 Series

Power extraction modules has full functional compliance with IEEE802.3af. They are designed to extract power from CAT5 Ethernet cable when sourced by a Power Sourcing Equipment (PSE) also conforming to IEEE802.3af. This series removes the need for localized equipment power source, significantly reducing installation costs. The IEEE802.3af standard allows for two power options, one on the data lines, the other on the spare pair. The NMPD01 series can have voltage input on the data lines or spare pairs. ***Note:*** *For additional technical information and safety approvals please see Digi-Key website for data sheets*

SMT05E and SMT15E Series Single Output

Non-isolated DC/DC converters packaged in a surface-mount footprint giving designers a cost effective solution for conversion. Ideal solution where board space is at a premium or tighter card pitch is required. The ultra-wide voltage trim range offers major advantages to users. It is no longer necessary to purchase a variety of modules in order to cover different output voltages.

SMTxxE-12W3V3J:
- Trim range: 0.8 ~ 3.63V • Set at default voltage of 0.8V

SMT05E-05W3V3J:
- Trim range: 0.75 ~ 3.63V • Set at default voltage of 0.75V • When Vin ≥ 4.5V, then Vout can be adjusted from 0.75 ~ 3.63V • When Vin < 4.5V, then Vout can be adjusted from 0.75 ~ 2.75V

SMT15E-05W3V3J:
- Trim range: 0.8 ~ 3.63V • Set at default voltage of 3.3V • When Vin ≥ 4.5V, then Vout can be adjusted from 0.8 ~ 3.63V • When Vin < 4.5V, then Vout can be adjusted from 0.8 ~ 2.75V

SMT15E-05S3V3J:
- Trim range: 0.8 ~ 3.63V • Set at default voltage of 3.3V • When Vin ≥ 4.5V, then Vout can be adjusted from 0.8 ~ 3.6V • When Vin < 4.5V, then Vout can be adjusted from 0.8 ~ 2.75V

Typhoon™ SMT12F Series

The SMT12F series is a new range of ultra-compact non-isolated point-of-load converters for space-critical applications. A key advantage of the SMT12F is that it only needs the addition of five 22µF ceramic output capacitors to provide a complete full-specification, high efficiency POL solution with transient response capabilities that extend up to 300A/µs. The total board space required for the module and capacitors is a mere 300mm^2, facilitating easy co-location with the load.

SIL15C and SIL20C Series

The SIL15C and SIL20C Series are a new high density open frame non-isolated converters for space-sensitive applications. Each model has a wide input range (4.5V ~ 5.5V or 10.2V ~ 13.8V) and offer a wide 0.9V ~ 3.3V/5V output voltage range with a 15A/20A load. An external resistor adjusts the output voltage from its pre-set value of 0.9V to any value up to the maximum allowed value for that model.

SIL30C and SIL40C Series

The ultra-wide output voltage trim range offers major advantages to users who select the SIL30C-12SADJ or SIL40C-12SADJ series. It is no longer necessary to purchase a variety of modules in order to cover different output voltages. The output voltage can be trimmed in a range of 0.9V ~ 5.0V. When the SIL30C-12SADJ or SIL40C-12SADJ series converter leaves the factory the output has been adjusted to the default voltage of 0.9V.

The Xgen series allows users to instantly configure high efficiency power supplies. Although very small in size, (40.4mm high, 260mm or 268mm long and either 89mm or 127mm wide) the Xgen series provides up to 1360W of output power (1450W peak). The Xgen series power supplies combine feature-laden front-ends (powerPacs) with slide-in output converters (powerMods). The plug-together architecture facilitates "instant" custom power solutions with industry leading 16W/in3 power density and up to 90% conversion efficiency. Available in two package sizes, with a variety of application specific powerPacs, the Xgen series provides a standard off-the-shelf solution for specific application requirements. ***FEATURES INCLUDE:*** • Universal AC Input Range (85 ~ 264VAC / 47 ~ 63Hz) • 1 ~ 12 fully floating DC outputs • Use powerPac with any combination of output modules in series or parallel • Line Regulation of <0.1% • Load Regulation of <0.2% • Efficiency up to 90% • Medical UL 2601 and Industrial UL 60950 versions • Active Power Factor Correction for EN61000-3-2 Class D Compliance • 5VSB @ 250mA Bias Supply • Remote Sense, Remote on/off and Voltage Trim Control Signals • DC Good, AC Good, Temperature Alarm and Fan Fail Status Signals • Over Voltage, Over Current, Over Temperature protection circuits • Ripple / Noise <1% peak to peak maximum (20mHZ bandwidth) • >1 million hours MTBF at full load and 25°C • Option Codes: 01 Thermal Signals, 02 Reverse Fan

External Power Supplies

SL Power has an external line of power products marketed under the Ault brand. External power is increasingly popular because OEMs require smaller, more feature-rich products that can be used in a variety of environments. The Ault brand has switch-mode power supplies in wall mount and desktop styles for ITE or medical applications. Energy Star models are ideal when efficiency is a must. Power over Ethernet products carry power and data in a single unit that can support legacy or next generation systems that meet the IEEE802.3af standard. **NOTE: Power cords are not included.**

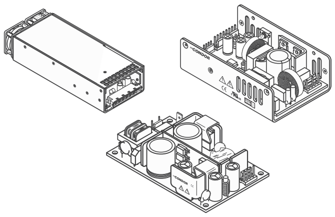
Medical Global Switchers



- Wide Input Range
- Input Protection: Internal AC fuse provided on all units. This fuse only blows if a catastrophic failure occurs in the unit — it does not blow on overload or short circuit. AC input protected against line transients by metal oxide varistors on all medical units.
- Overload Protection: Fully protected against short circuit and output overload. Short circuit protection is cycling type on Outputs #1 and #2; fold back type on Outputs #3 and #4. Recovery after fault is automatic.
- 2-Year Warranty
- For Safety and EMC specifications please see series data sheets.

* Floating fourth output can be referenced as either positive or negative. **Amperage Rating Notes for GLC75 and GLC110 Series:** • **Current A**: Rating with unrestricted convection cooling. Total power not to exceed 75W. • **Current B:** Rating with 26cfm forced air cooling. Total power not to exceed 110W. • **I Peak:** During peak load conditions output regulation may exceed specified limits. † Output 3 is isolated. Can be connected as + or - output. ‡ Peak rating or continuous rating with 150 LFM air cooling. § To maintain these regulation conditions, the 5.1V must be at least 1/4 of V2 and not greater than 5 times the V2 current Δ Requires 5.1V to be adjusted within ±1% with at least a 0.4A load to maintain regulation on this output.

EISA COMPLIANT

The Energy Independence and Security Act (EISA) OF 2007 mandates that external power supplies sold in the U.S. meet both a minimum efficiency percentage based on rated output wattage, and a maximum power output of 0.5W in a no-load condition. All CUI Inc EPS, ETS, EMS and EMT series models meet or exceed EISA 2007 standards, also referred to as "level IV," and are legal for use in all 50 states and territories. To address upcoming energy efficiency standards, including the **European Union's Eco-design Directive (2005/32/EC)**, CUI has released a full line of "level V" high efficiency power adapters. For further information, please view the *External Power Supply Efficiency Regulations* product training module available on Digi-Key's website.
